

Valvola di sovrapressione

Impiego

Le valvole di sovrapressione modello V185 e V85 hanno la funzione di mantenere costanti le pressioni di lavoro e proteggere i sistemi e le condotte contro eventuali sovrapressioni o picchi di pressione.

La terza via d'uscita, stampata direttamente sul corpo valvola, ne permette l'installazione direttamente sulla linea principale.

La conformazione interna del corpo valvola consente una minima perdita di carico quando la valvola è nella posizione di apertura.

Funzione

Se la pressione all'ingresso della valvola supera il valore impostato, il pistone della valvola viene sollevato contro la molla che, di conseguenza, apre la valvola e scarica la pressione in eccesso nel tubo di uscita.

La valvola si chiude non appena la pressione di ingresso scende sotto il valore di pressione preimpostato.

Caratteristiche

- Tutte le parti a contatto con il fluido sono realizzate in materiali plastici altamente resistenti
- La membrana separa la parte attuatore dalla sezione di passaggio del flusso
- La pressione di esercizio è tarata attraverso una vite di regolazione e fissata con un dado di bloccaggio
- La conformazione del corpo valvola permette di ottenere basse perdite di carico
- Non è necessaria alcuna energia ausiliaria per azionare la valvola
- La valvola è esente da manutenzione e può essere installata in qualsiasi posizione

Materiali

- Corpo: PVC
Membrana: EPDM
Range temperature: 0 °C ÷ +60 °C
- Corpo: PP
Membrana: EPDM o EPDM rivestito PTFE
Range temperature: -10 °C ÷ +80 °C
- Corpo: PVDF
Membrana: EPDM rivestito PTFE
Range temperature: -20 °C ÷ +100 °C

Pressure relief valve

Use

The pressure relief valves model V 185 and V85 have the function of keeping the working pressures constant and protecting the systems and pipes against any overpressure or pressure peaks.

The third way out, printed directly on the body valve, allows installation directly on the main line.

The internal conformation of the body valve allows a minimum pressure drop when the valve is in the open position.

Function

If the pressure at the valve inlet exceeds the set value, the valve piston is raised against the spring which, consequently, opens the valve and releases the excess pressure in the outlet pipe.

The valve closes as soon as the inlet pressure sinks below the preset pressure value.

Features

- All parts that come into contact with the medium are made of highly-resistant plastics
- The control diaphragm separates the actuating drive from the flow section
- The operating pressure is set with an adjustment screw and secured with a lock nut
- The shape of the housing that assists flow results in good flow values
- Control deviations are kept low by the large control surface and the spiral spring
- No auxiliary energy is required in order to operate the valve
- The valve is largely maintenance-free and can be installed in any position

Materials

- Body: PVC
Diaphragm: EPDM
Range temperature: 0 °C ÷ +60 °C
- Body: PP
Diaphragm: EPDM or EPDM coated PTFE
Range temperature: -10 °C ÷ +80 °C
- Body: PVDF
Diaphragm: EPDM coated PTFE
Range temperature: -20 °C ÷ +100 °C

Dati tecnici

- Tipo: V 185 (DN 10 ÷ DN 50), PN 10
Campo di regolazione: 0,5 ÷ 10 bar
- Tipo: V 85 (DN 65 ÷ DN 80), PN 6
Campo di regolazione: 1 ÷ 6 bar
- Tipo: V 85 (DN 100), PN 4
Campo di regolazione: 1 ÷ 4 bar

Technical data

- Type: V 185 (DN 10 ÷ DN 50), PN 10
Adjustment range: 0,5 ÷ 10 bar
- Type: V 85 (DN 65 ÷ DN 80), PN 6
Adjustment range: 1 ÷ 6 bar
- Type: V 85 (DN 100), PN 4
Adjustment range: 1 ÷ 4 bar
